

# weekly report

## 2015.11.16-2015.11.22

### 1.Project

#### Global Network Project

- For the points sharing the same latitude and longitude but different ips, show only one of them. And when click on the shown point, a bubble chart will be pop up which shows all of the hidden points. If the bubble chart is zoomed in to a certain level, ips will show on each bubble.
- Revise the sunburst graph which shows domain names visited by a certain ip. It can now move with the map, maintaining its own geographic position.
- Revise the brush function. It can now return the bound of the rectangle brushed on the map to backstage.
- Finish the search function of the physical map. It can now search a single ip, ip segment as well as ips in a text file. When you search an ip on the physical map, it can be highlighted on the map and when you change the interface to the logical map interface, the same ip will also be highlighted on it.
- Revise bugs: the points' opacity confused problem, the ip info won't hide problem;

#### Data Map Project

- Revise the requirements document according to the update demands.

### 2.To Do

#### Global Network Project

- Link to the backstage to get data

#### Data Map Project

- Think about how to do it
